

CKS.DMS for SAP Business One

Your solution for simple and fast archiving.

Product description

Our document management system (CKS.DMS) simplifies paper-intensive processes in SAP Business One. First of all, it's easy for your company to use – employees can install and operate it without product knowledge. Furthermore, in comparison to other products on the market, CKS.DMS improves your company's profitability because of low set-up and support costs. CKS.DMS is integrated so that as soon as a document is saved (scanned and printed), character recognition and keyword indexing occurs in the background. Using the document or business partner, all documents can be displayed in an intelligent preview, which also features a search function across the entire archive.

Easy-to-use data archiving functions are available for archiving other documents (such as Office documents or pictures in digital form). These documents are also included in the keyword indexing as much as possible to yield additional results during the archive search.

Advantages

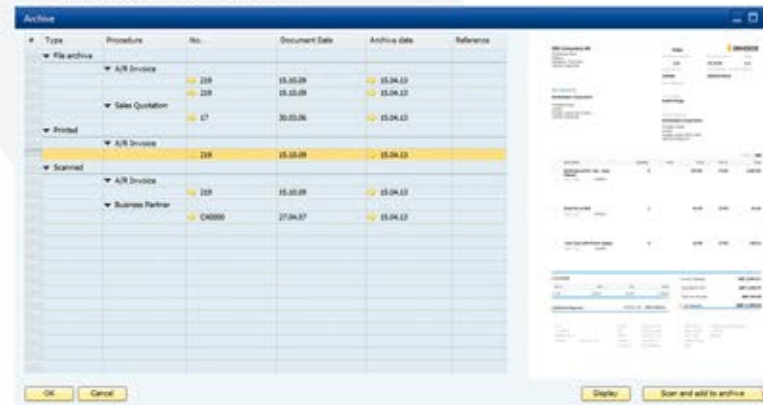

- **Technology:**
 - Integrated character recognition and keyword indexing (with no extra costs)
 - Automatic file storage through holistic process configuration
 - Revision control / security
 - Archiving for batches and serial numbers
- **Installation:**
 - Easy installation procedure with a wizard
 - Pre-configured basic settings for a quick start
- **Speed:**
 - Intelligent preview
 - Memory-optimized SAP Business One connection
 - Standard API from SAP Business One without additional .NET forms or similar
- **Usability:**
 - One-click archiving
 - intuitive user operation using SAP Business One standards
